Overview

The NMI Shopware 6 Plugin provides a comprehensive payment solution that seamlessly integrates NMI's payment gateway into your eCommerce store. This plugin offers a wide range of payment options and tools to enhance your customers' purchasing experience while maintaining flexibility for store administrators. With features such as credit card capture, ACH payments, subscription handling, and refunds, the NMI plugin is designed to support a variety of transaction types, from one-time purchases to recurring billing.

Key Features Include:

- **Credit Card Capture**: Securely process credit card payments via NMI's PCI-compliant payment gateway.
- **ACH Capture**: Enable customers to make payments directly from their bank accounts using eCheck (ACH).
- **Authorize and Capture**: Add an additional layer of security by allowing payments to be authorized before capturing funds, giving admins control over order approval.
- **COLI (Cancel Order by Line Item)**: Admins can cancel individual items within an order, enabling more precise returns and inventory management.
- **Refunds**: Easily process full or partial refunds for orders, providing a smooth customer service experience.
- **Recurring (Subscription) / Mixed Card**: Support subscription-based products and allow customers to purchase both standard products and subscription items using a single card.
- **Save Card**: Let customers securely store their credit card information for faster and more convenient future purchases.

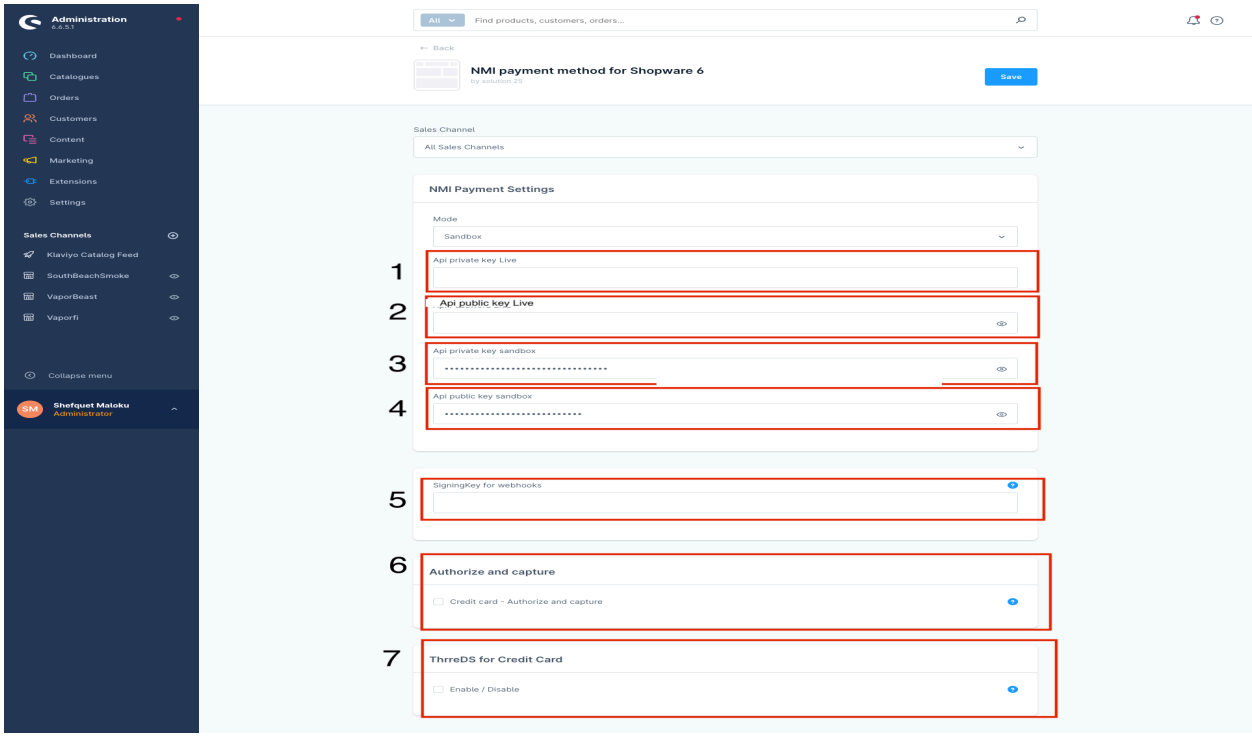
The plugin also includes advanced configuration options, such as API key management for live and sandbox environments, webhook signing, and 3D Secure verification for added payment security.

By integrating the NMI Shopware 6 Plugin, you provide your customers with a seamless and secure payment experience while maintaining full control over transaction processes, refunds, and order management.

2. Plugin Configuration

Before using the plugin, configure the API keys and payment settings:

1. **API Key for Live** – Required for live transactions.
2. **API Public Key Live** – Public key for authentication in the live environment.
3. **API Key for Sandbox** – Required for testing transactions in the sandbox environment.
4. **API Public Key Sandbox** – Public key for authentication in sandbox mode.
5. **Signing Key** – Used for secure webhook communication.
6. **Authorize and Capture (Activate/Deactivate)** – When enabled, transactions must be manually approved before funds are captured.
7. **ThreeDS for Credit Card** – When enabled, requires 3D Secure authentication for added security.



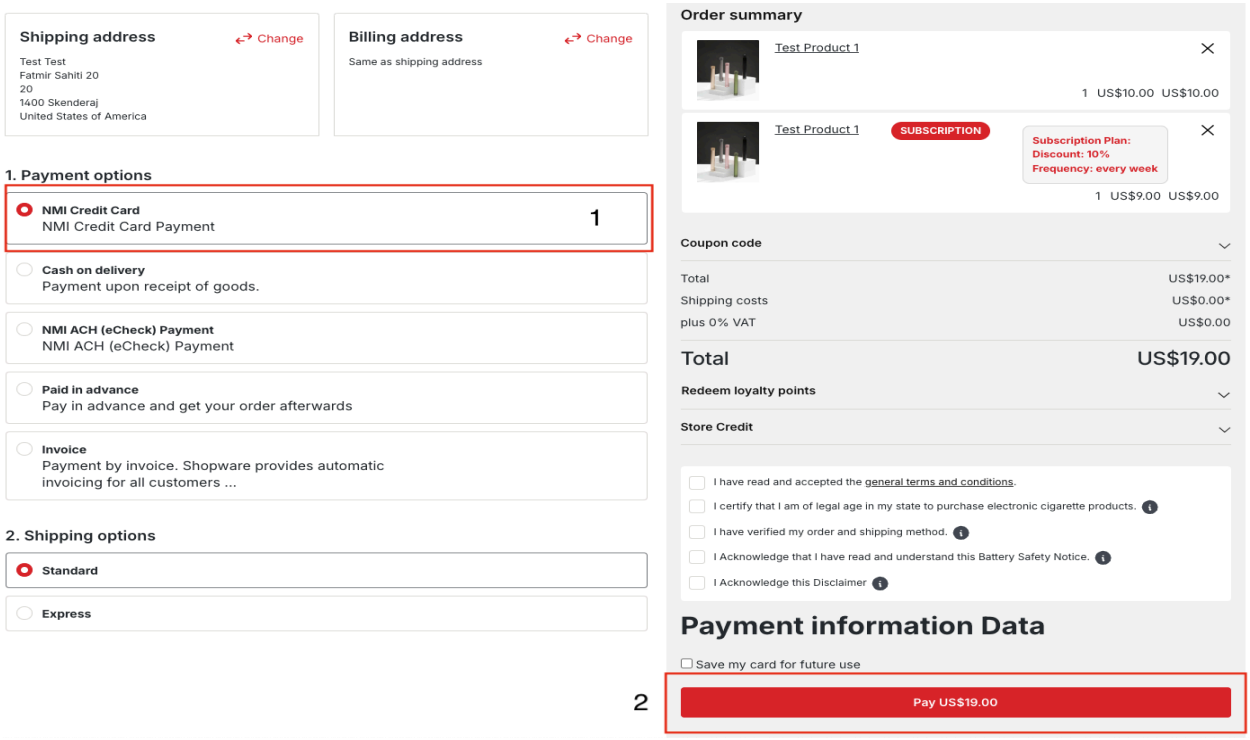
3. Credit Card Capture This feature allows customers to complete transactions via NMI's payment gateway using a credit card.

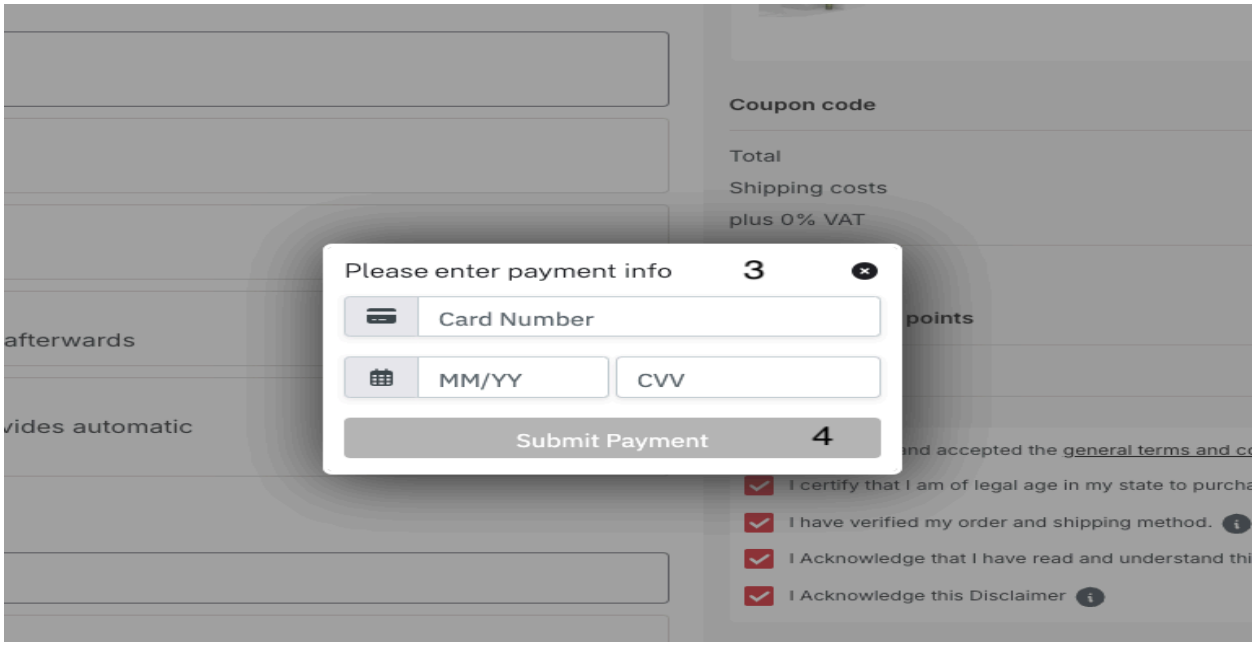
How It Works:

- Customers enter their credit card details in a PCI-compliant form.
- The payment is processed securely via NMI.

Steps:

1. Select "NMI Credit Card" as the payment method.
2. Click "Pay."
3. Enter credit card details into the PCI-compliant NMI form.
4. Submit payment.





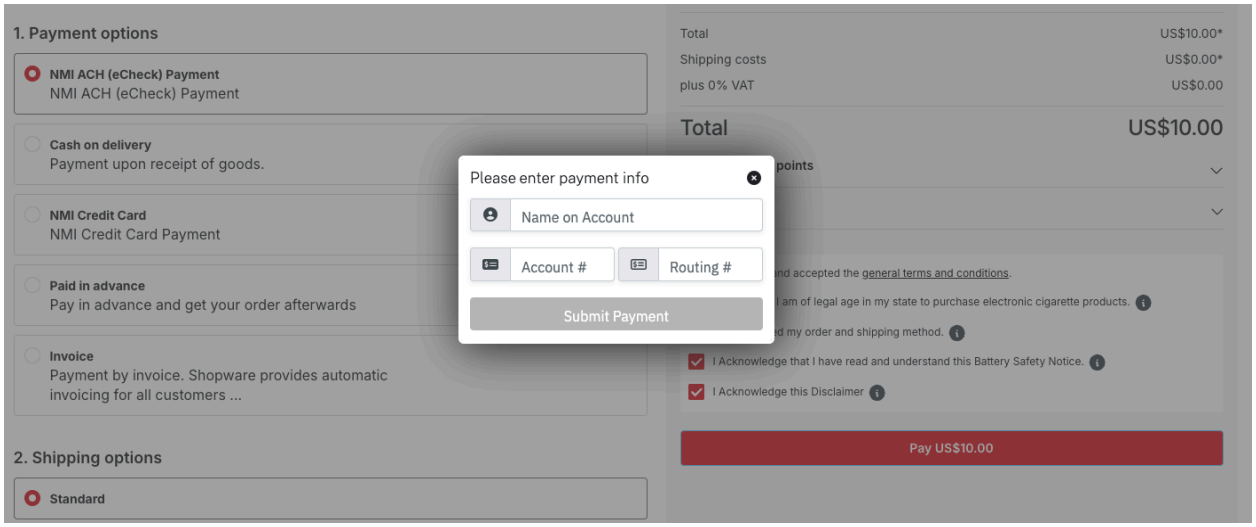
4. ACH Capture ACH Capture (eCheck) enables customers to make payments using their bank account details, offering an alternative to credit card transactions.

How It Works:

- ACH transactions transfer funds from the customer's bank account directly.

Steps:

1. Select "NMI ACH (eCheck)" as the payment method.
2. Click "Pay."
3. Enter the required bank account information.
4. Submit payment.



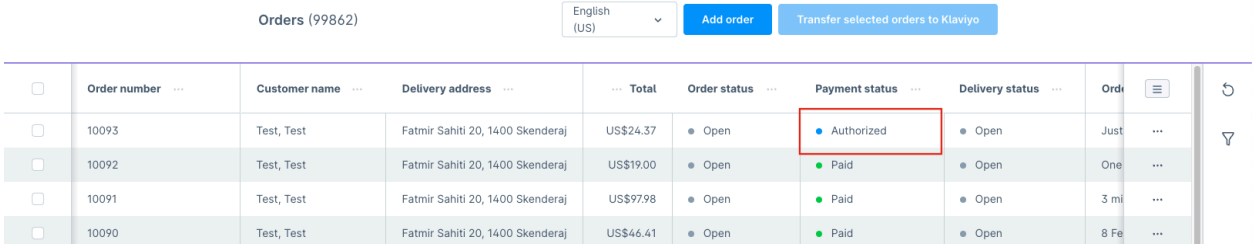
5. Authorize and Capture for Credit Card This feature allows payment authorization and capture in two stages. The payment is initially authorized, freezing the funds in the customer's bank account. The admin can then approve or decline the charge, completing or canceling the transaction.

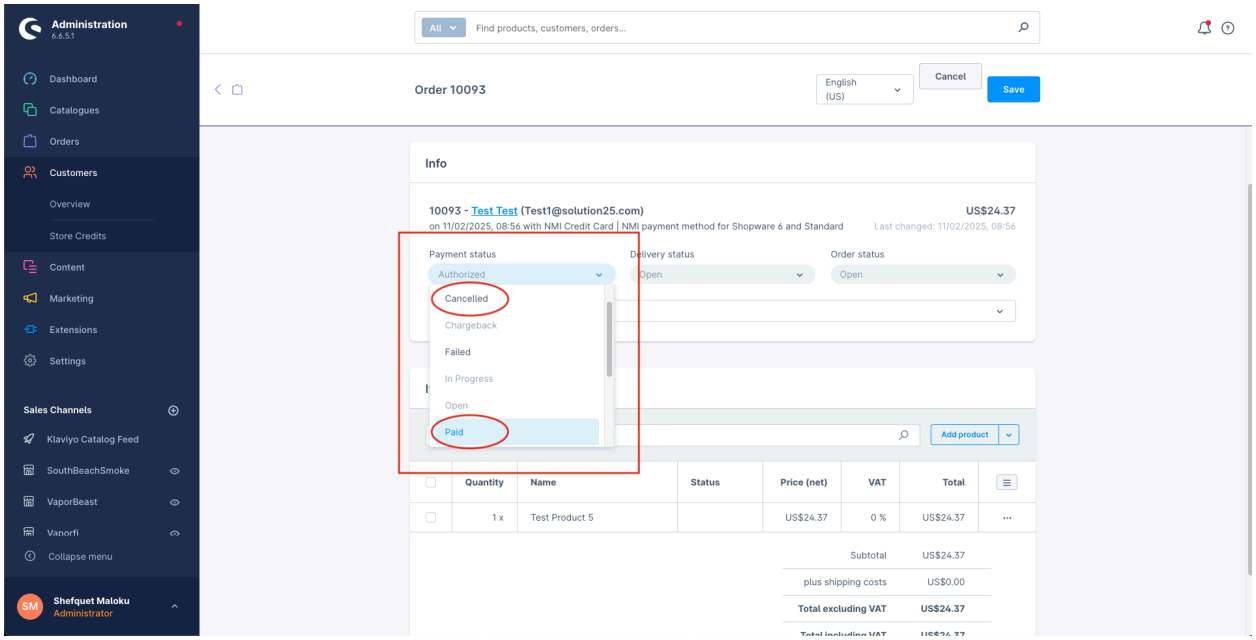
How It Works:

- Payment status remains **"Authorize"** until manually approved.
- Admin can either **Capture (charge the customer)** or **Cancel the transaction**.

Steps:

1. Enable the "Authorize and Capture" feature in plugin settings.
2. New orders will show as "Authorized."
3. Navigate to Admin Panel → Orders, and change the payment status to "Paid" or "Cancelled."





6. COLI (Cancel Order by Line Item) COLI allows admins to cancel specific items in an order without affecting the entire transaction, providing more flexibility in managing returns.

Allows the cancellation of specific line items from an order without canceling the entire order.

How It Works:

- Customers can choose which products to cancel.
- The remaining items can still be paid for.

Steps:

1. Select the product(s) you want to cancel.
2. Click "Delete" to remove the item(s).
3. Save the updated order.
4. Change the payment status from "Authorized" to "Paid."

7. Refunds (Full & Partial)

Supports full and partial refunds through NMI.

How It Works:

- Full refunds return the entire payment.
- Partial refunds return only a portion of the total amount.

How to Use (Full Refund):

1. Navigate to **Orders → Item Section**.
2. Select the product(s) to be refunded.
3. Click **Return Items**.
4. Save the order.
5. Click **Create Refund**.
6. Change status to **"In Progress"**.

How to Use (Partial Refund):

1. Navigate to **Orders → Item Section**.
2. Select the product(s) to be refunded.
3. Adjust the refund amount (full or partial).
4. Click **Return Items**.
5. Save the order.
6. Click **Create Refund**.
7. Change status to **"In Progress"**.

Full refund:

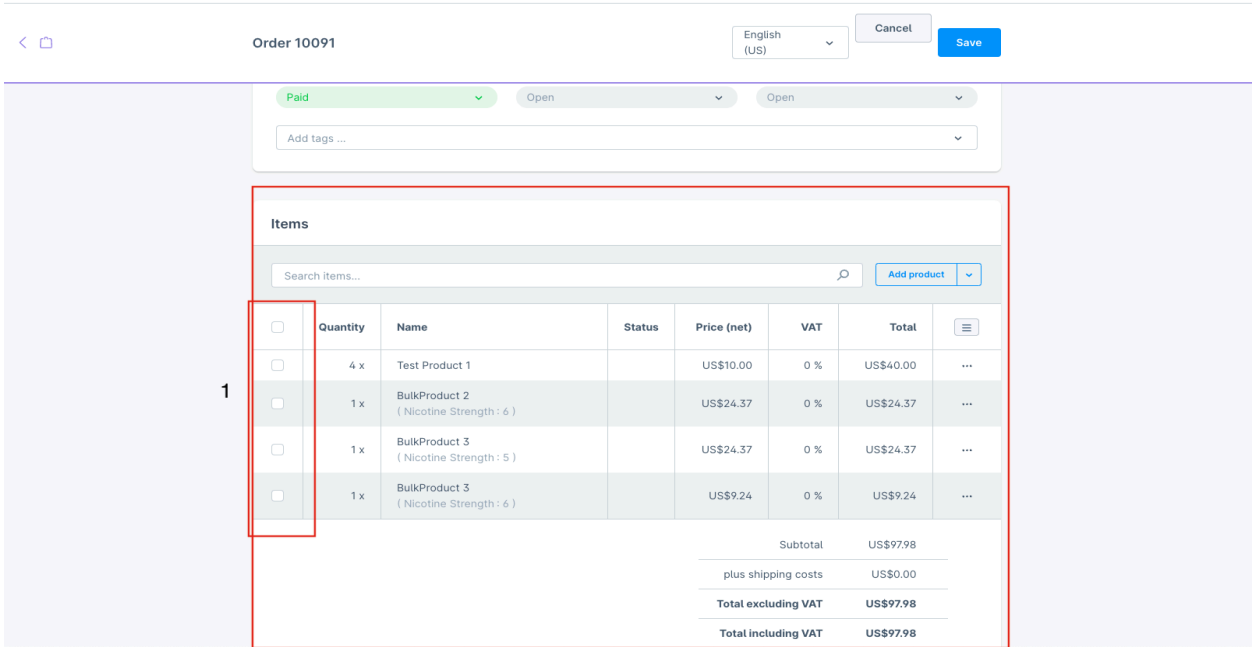
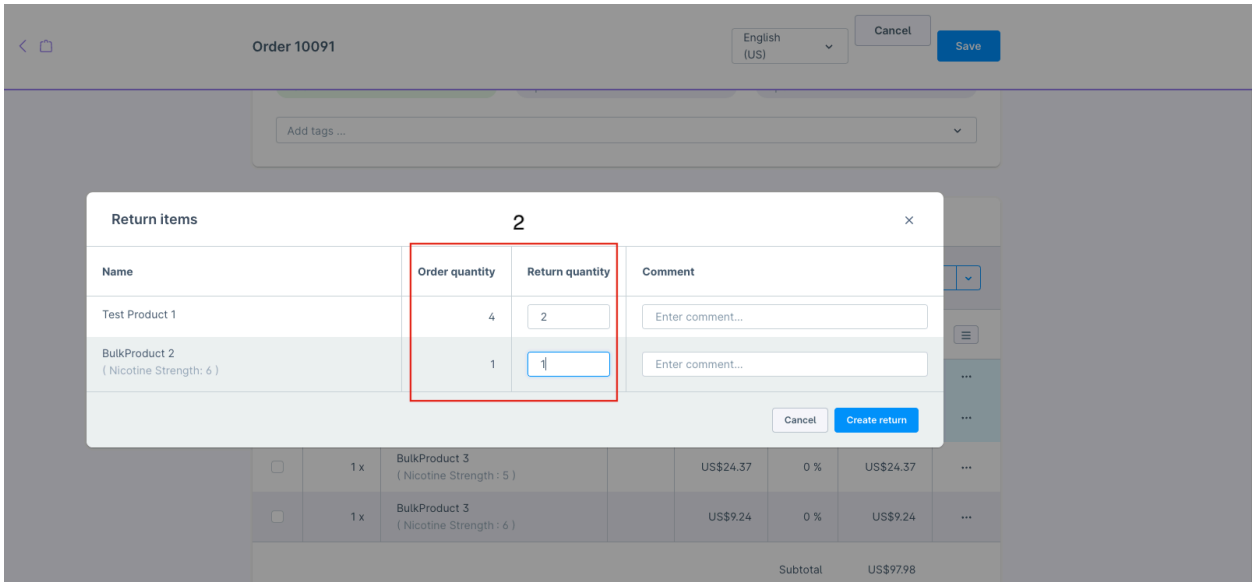
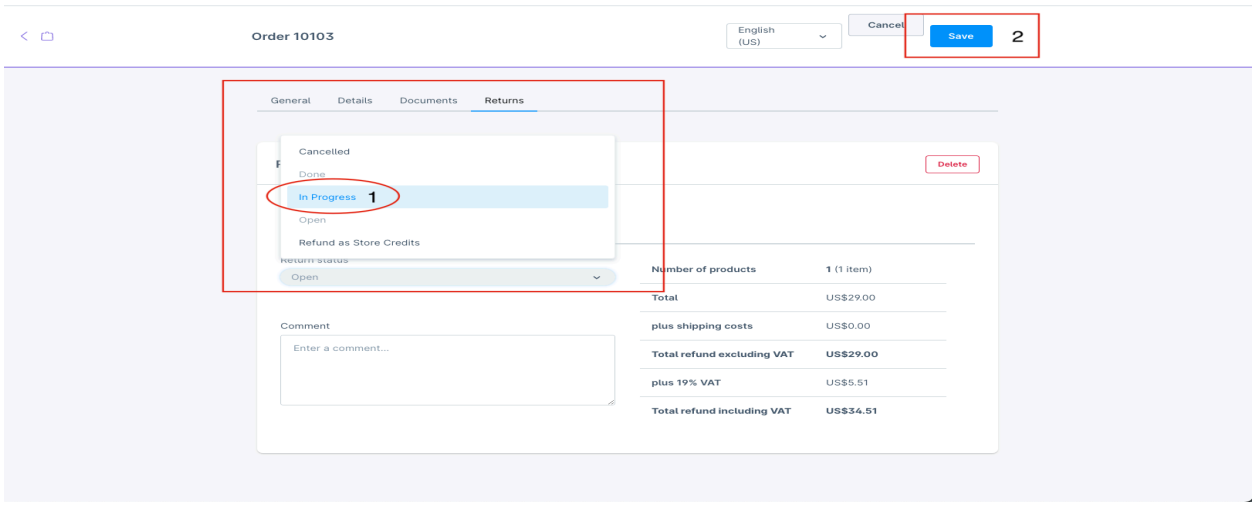
Partial Refund:

1. Navigate to the order and select the product for return.
2. Specify the quantity of items to be refunded.
3. Return the item(s).
4. Save the order.
5. Create a partial refund.

Update the order status to "In Progress."







8. Recurring Payments (Subscriptions) & Mixed Cards

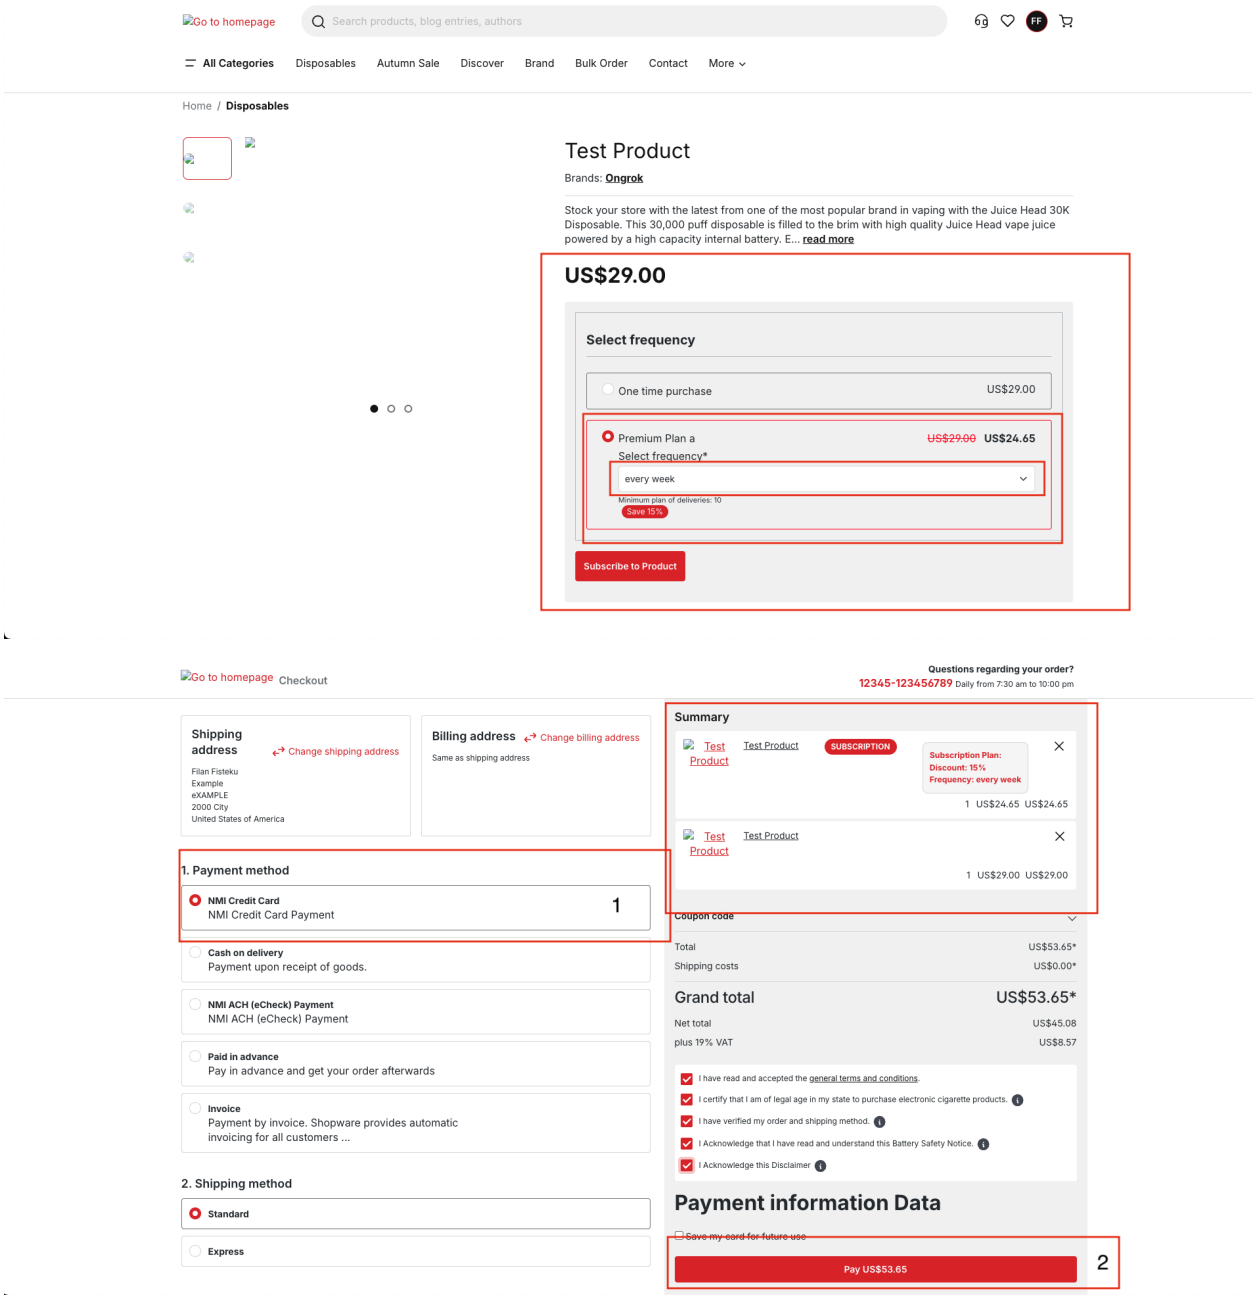
This feature supports subscription-based products, which can be purchased only through NMI Credit Card. Subscription charges are automatically billed at regular intervals.

How It Works:

- Subscriptions can only be purchased using **NMI Credit Card**.
- Customers are automatically charged based on the subscription cycle.
- A **Vaulted Customer ID** is created for future transactions.

How to Use:

1. Customers purchase a subscription product.
2. The system saves their card details securely.
3. Recurring payments are processed automatically.



Feature: Mixed card

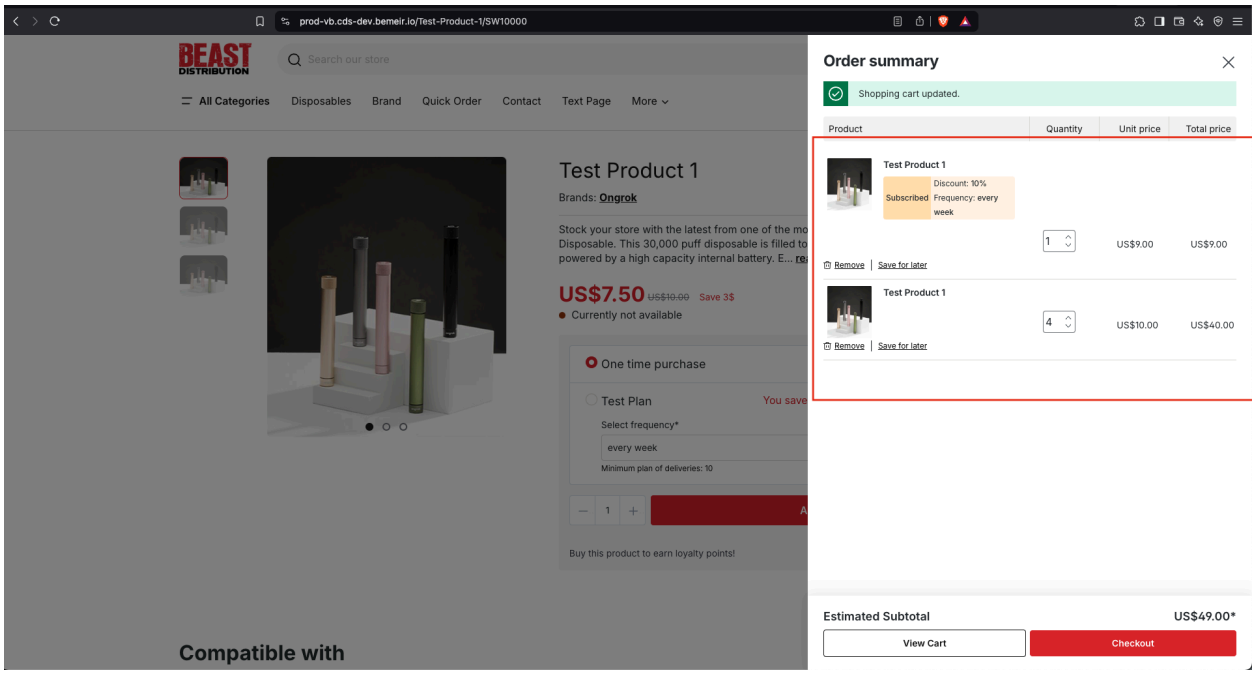
9. Mixed Card The Mixed Card feature enables customers to purchase both regular products and subscription-based products using a single cart. This functionality integrates standard purchases and subscriptions into the same transaction.

How It Works:

- The system differentiates between **one-time purchases** and **subscription-based payments**.
- The same credit card can be used for both types of transactions.

How to Use:

1. Add regular and subscription products to the cart.
2. Proceed to checkout.
3. Pay with a single credit card.



10. Save Card Feature

Allows customers to securely save their card details for future transactions.

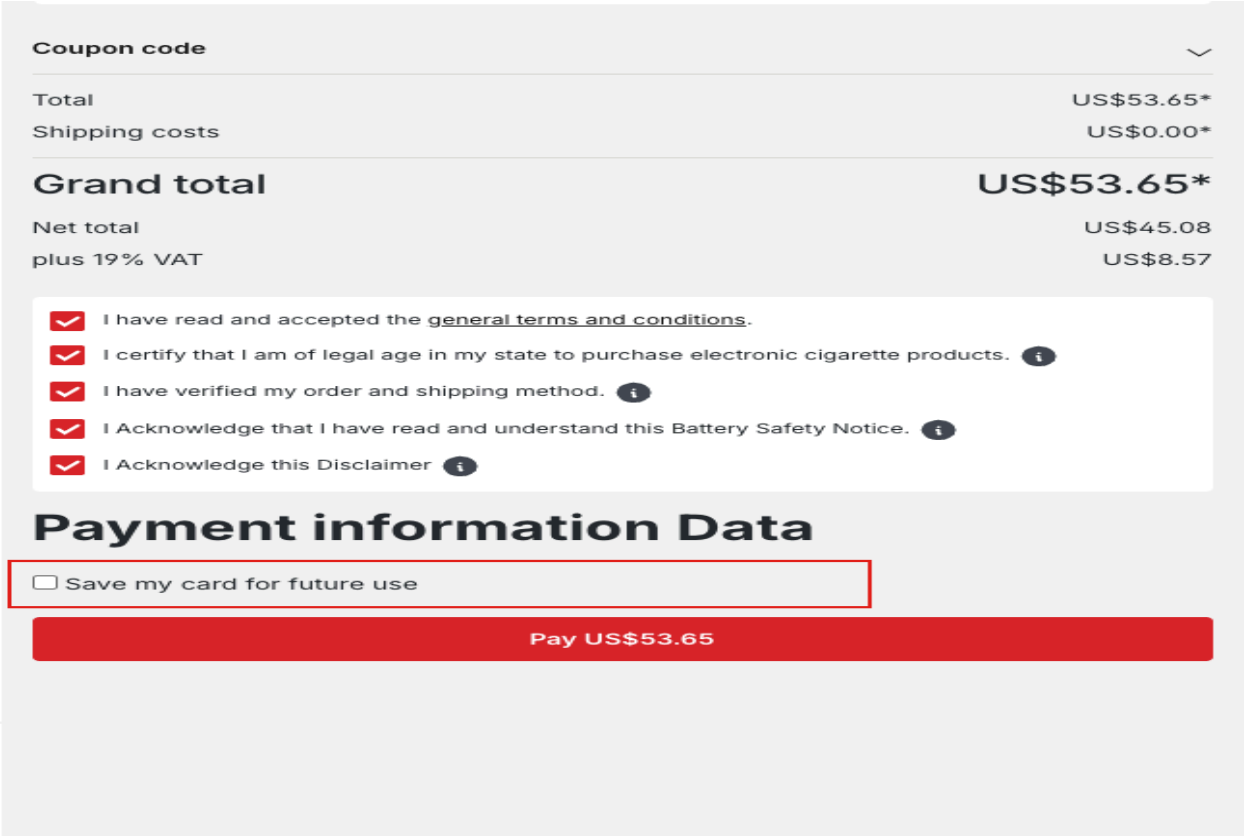
How It Works:

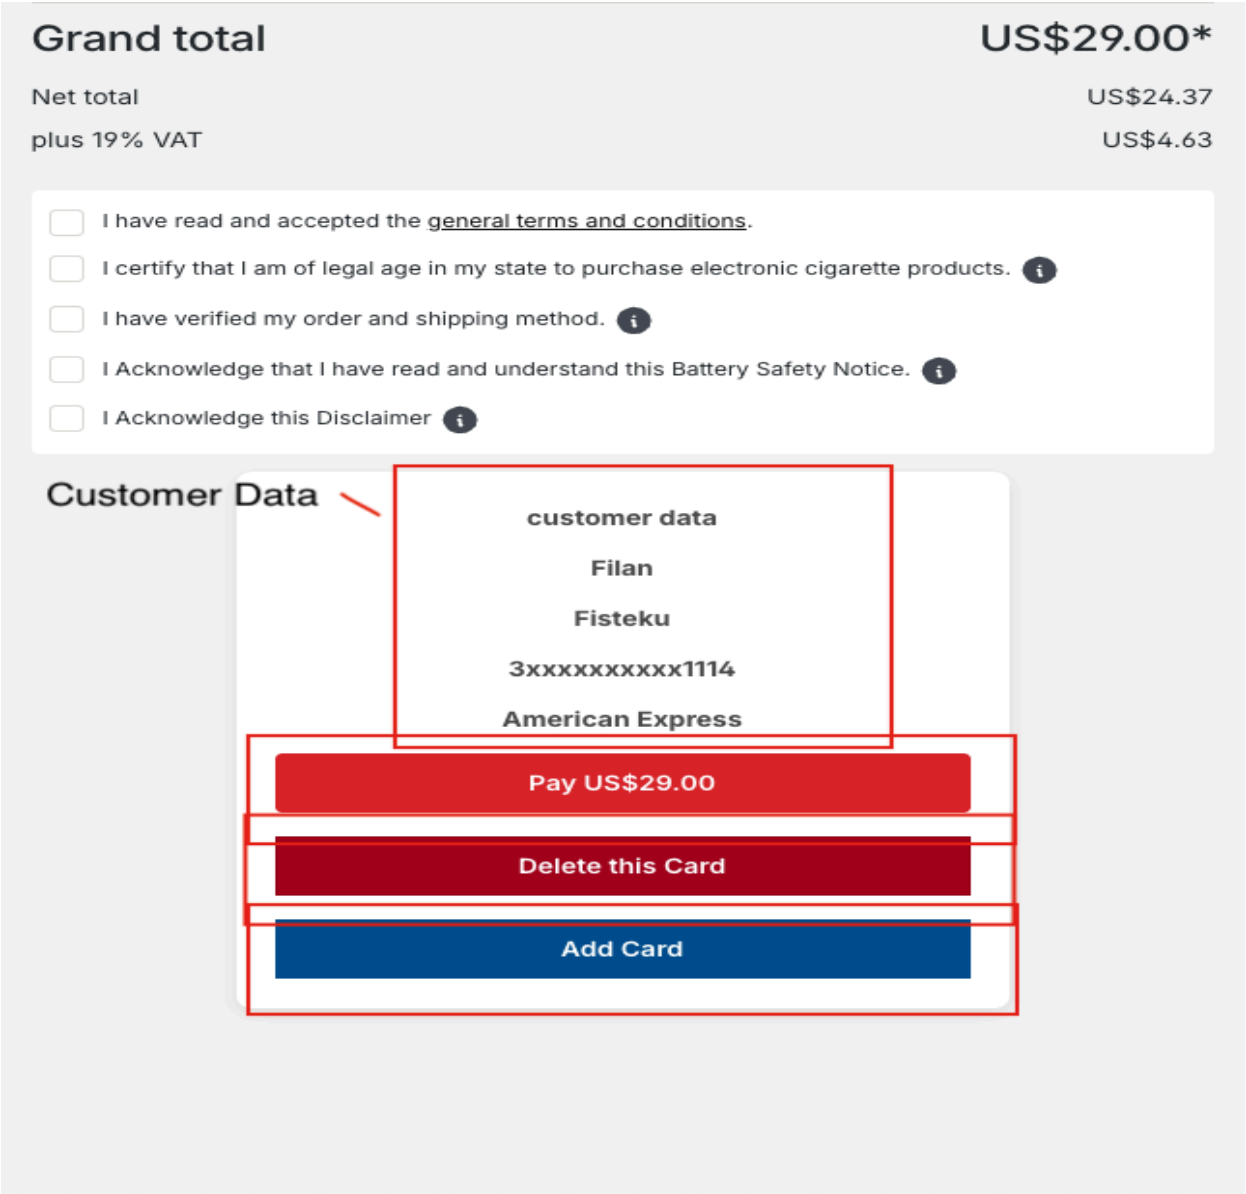
- A **Vaulted ID** is created to store the customer's payment details.
- Customers can choose **one-click payments** in future transactions.
- **How to Use:**

1. Select products and proceed to checkout.
2. Fill in payment details.
3. Check the box **"Save my card for future use"**.
4. The saved card will appear as a payment option in future checkouts.

Managing Saved Cards:

- **Delete Card**: Removes saved card details from NMI.
- **Add Card**: Allows adding a new card for future transactions.





Add multiple card:
